VAD

INTRODUCTION

QAVAD is an ERASMUS+ project that seeks to work on improving the accompaniment of elderly people at home to maintain their autonomy and to provide support to carers and professionals working in the home.

QAVAD aims to promote the development or maintenance of cognitive, motor and social skills, which are essential for quality of life (socialisation, recreational activities, sports outside the home, voluntary work, cognitive workshops, etc.).

The QAVAD project aims to work on good practices in European countries that will be shared and transferred for the creation of shared training and technical methodology, at European level, to update and renew vocational training

OBJECTIVES

- Prevent isolation of individuals and their families in vulnerable situations at home.
- Improve and diversify the supply of training and education courses for social and health workers in the field of home care.
- To promote the coordination of the actors in the territory who work around the person at home.
- Support the emergence of good partnership practices between the “all” institution and the “all” home.

METHODOLOGY

1. An action-research project developed jointly by training and research centres and of social-health services, based on the analysis of existing practices and innovation.

2. A participatory project that includes various agents, public entities and socio-health centres in each of the territories, with the aim of providing solutions adapted to the needs of professionals and users, and taking into account existing public policies.

RESULTS

The expected results are the following 3 intellectual productions:

1. Inventory and analysis of innovative good practices in training and services in the field of home care
2. Training programme to promote quality of life at home
3. technical guide for improving the quality of life at home

TERRITORIES

4 countries: France, Denmark, Spain and Italy
9 partners:

- 1 University
- 1 organisation dedicated to the support of elderly people in institutions or at home and to research in this sector.
- 3 organisations dedicated to home help services for the elderly.
- 4 training centres for higher and vocational education in the social sector.

KEY CONCEPT

Quality of Life at Home

PROJECT PHASES

September 2019 - April 2020 :

- Evaluation of good practices and needs in the field of home care for the elderly

May 2020 - December 2021 :

- Training design and implementation
- Design and implementation of the guide

January 2022- July 2022

- Final program design
- Dissemination actions
